                Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT7T3 vector. Library went through one round of normalization to Cot5, and was constructed by Bento Soares and M. Fatima Bonaldo. "

The sequence contained an oligo-df track that was present in the
oligonucleotide that was used to prime the synthesis of first
strand cDNN and therefore this may represent a bonafide poly A
tail. The sequence tag present in the cDNA between the NoII site
and the oligo-df track served to identify it as a clone from the
normalized testis library cDNA Library Preparation: M.B. Soares Lab

cloned using 5' linkers 5'-AATTGGGAGGG-3' and
5'-CTGGTGCG-3'. Size selection of >400bp material gives
average insert size ranging from 1-2 kb. Library was mass
excised (from lambda-UnizAR-XR) and resulting
single-stranded phagemids were prepped and tranformed
into DH10B. Library contains 98:3* recombinants.
